

CARE AND MAINTENANCE OF YOUR FENCE AND GATES

Your Fence and Gates will require maintenance.

The following is a list of items you should keep watch for to keep your Fence or Gate(s) in beautiful shape for years to come:

A. The main maintenance item that needs to be watched for is scratches and damages that penetrate the Powder Coating. These should be addressed as soon as possible.

B. Inspect your Fence or Gate(s) yearly for any damage that may have caused rust to set in. If rust has formed, there is no need to be concerned. Simply use a wire brush to take the rust off, clean the area of dust/ dirt and then use Rust-Oleum paint to touch the area up.

C. If you have a Gate(s), grease the hinges by using a common automotive grease gun on the zerks (grease fittings).

This can be done on a 6 to 12 month interval. Any general grade lubricant grease will work fine.
